

REMOTECOPY

COPY FROM REMOTE TERMINALS WITH EASE

LA Perl Mongers

Wednesday May 29, 2013

by [Nate Jones](#)

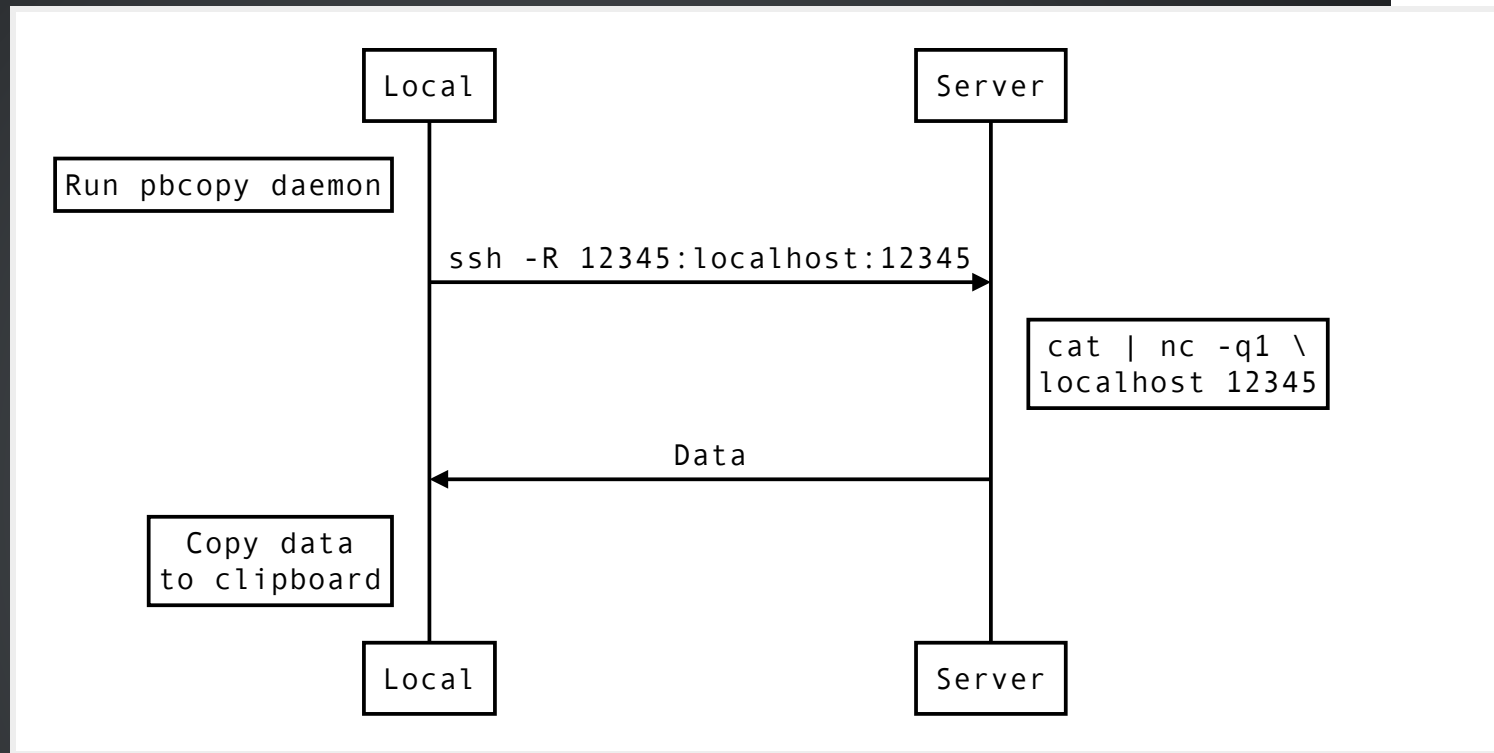

THE PROBLEM

I want to copy data from remote terminals
as easily as local terminals.

ONE SOLUTION

remote-pbcopy

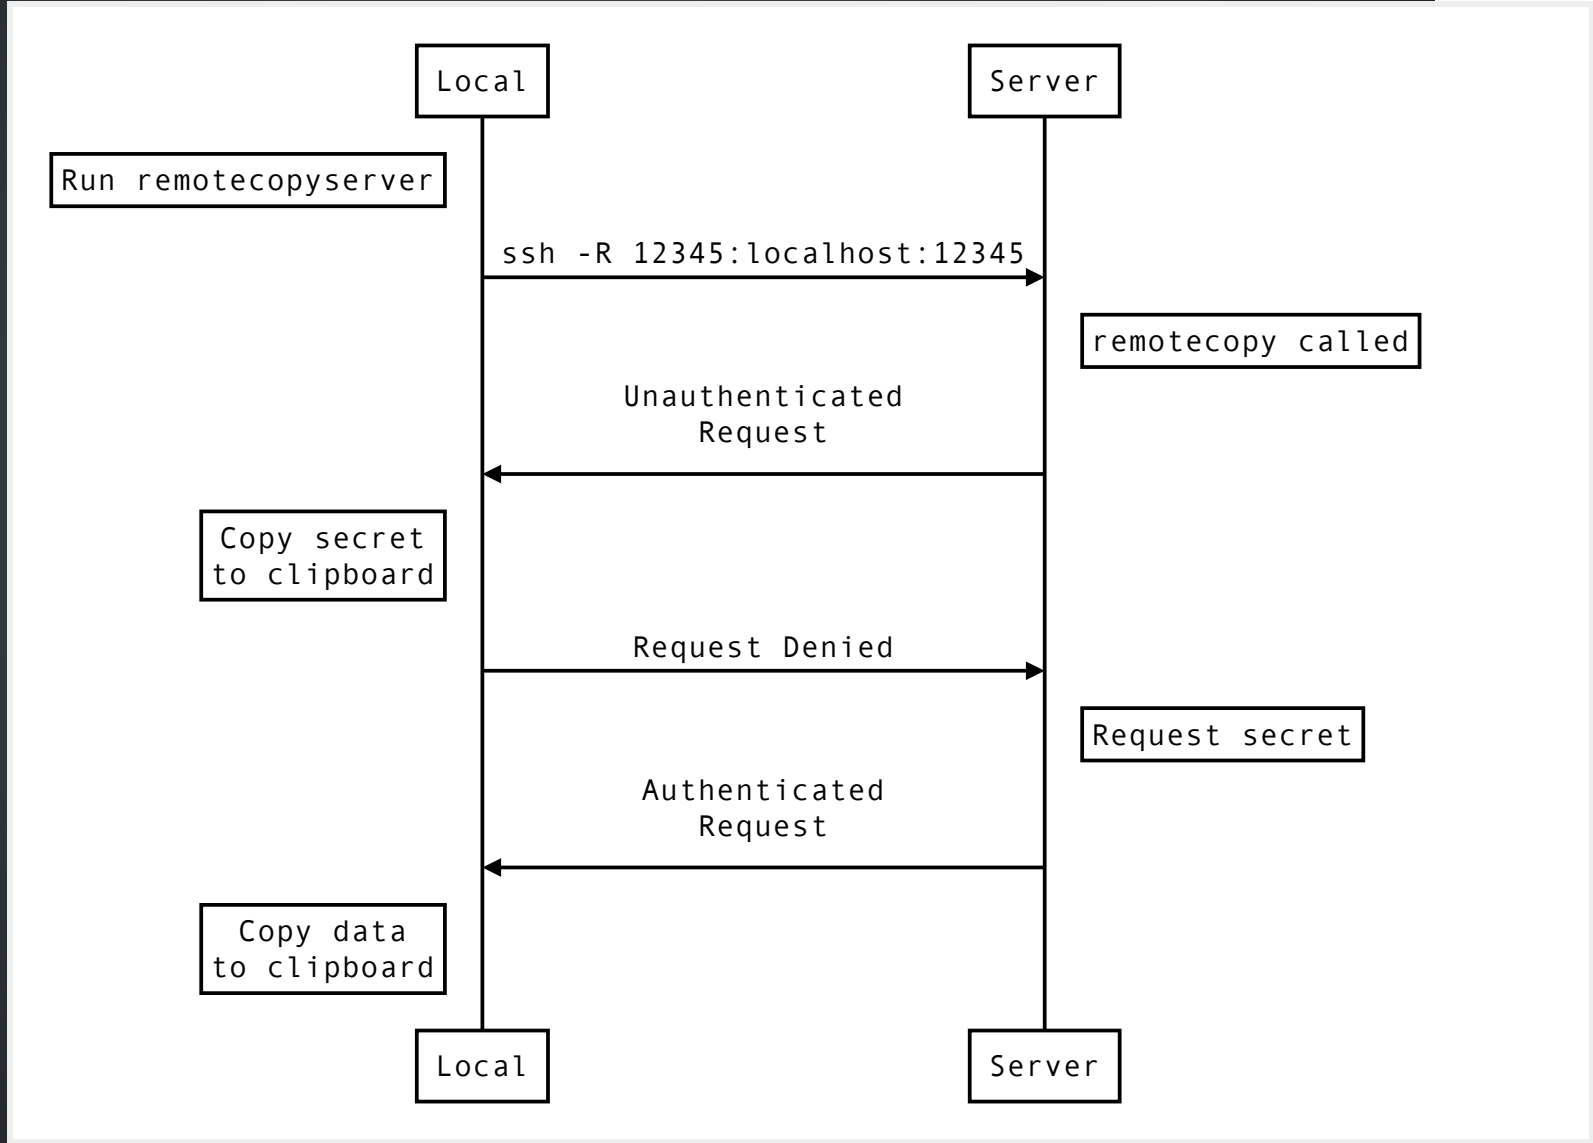

1. Run `pbcopy` as a LaunchAgent
2. Forward port 12345 via SSH
3. `$ cat | nc -q1 localhost 12345`
4. Done!

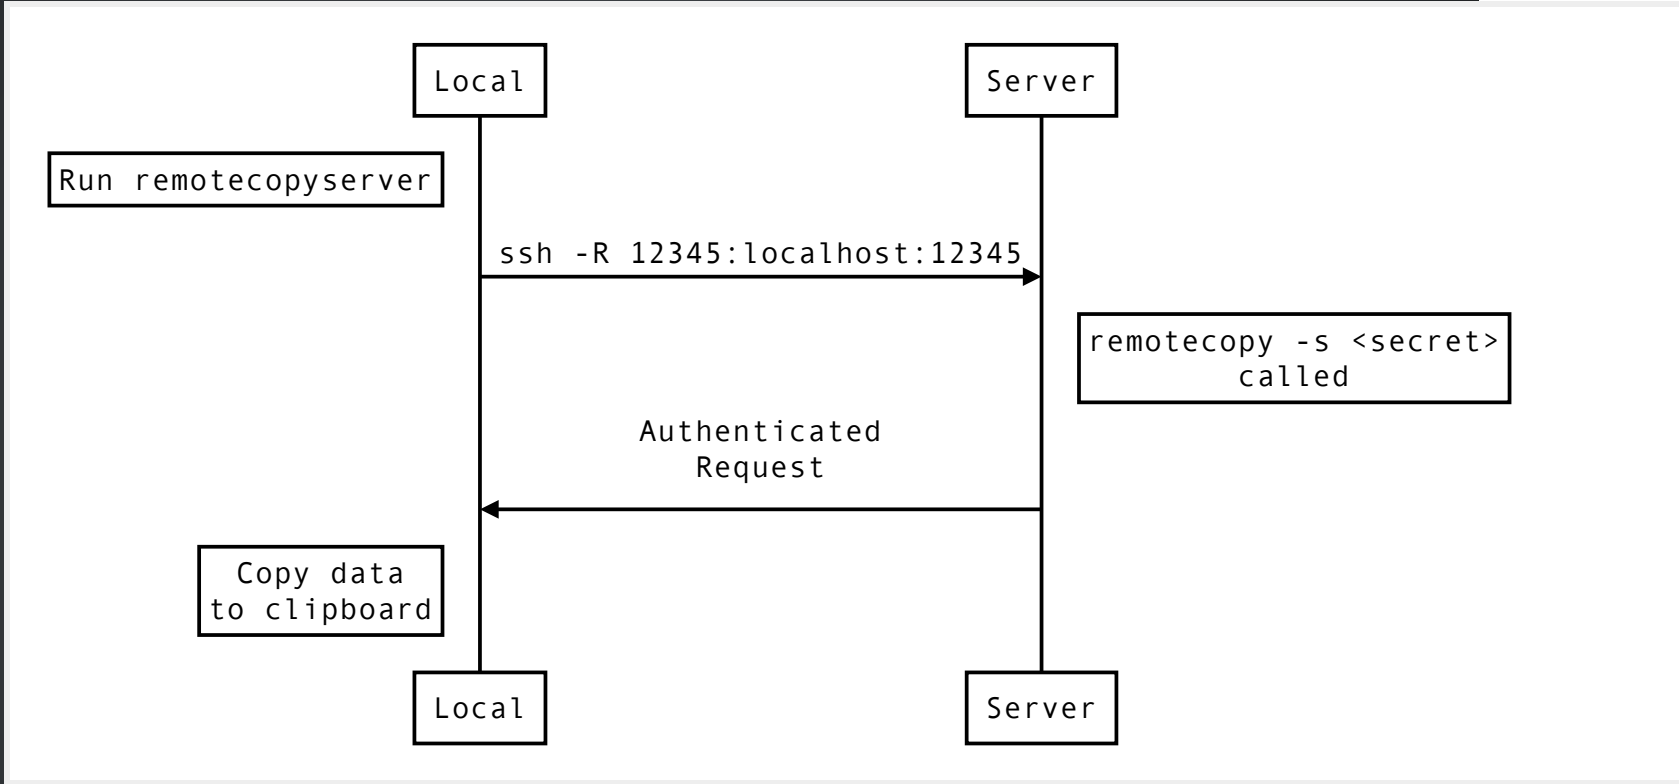

MY SOLUTION

remotecopy

1. Run ``remotecopyserver -x start``
2. Forward port 12345 via SSH
3. `$ cat | remotecopy`
4. Paste secret
5. Done!

HELP

Usage:

remotecopy [options] [datatocopy]

Options:

-n --non-interactive	Don't prompt for secret if not found, communicate with exit code.
-s --secret <secret>	Remote copy secret, as provided by the server.
-p --port <port>	Port to connect to (defaults to 12345).
-a --address <ip addr>	IP address to connect to (defaults to 127.0.0.1).
-c --chomp	Chomp the last newline, if only one exists.

Documentation options:

-h --help -?	brief help message
--man	full documentation

VIM PLUGIN

- <leader>y - Copy range or whole file
- <leader>r - Copy register

Server secret is saved in vim memory,
so subsequent copies won't prompt.

THE CODE

- `remotecopyserver`
- `remotecopy`
- `remotecopy.vim`

THE END
